DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 26-34, 39-50, and 73-77, drawn to the method of operating a microcavity discharge device, classified in class 315, subclass 246.
 - II. Claims 51-72, drawn to method of manufacturing a microcavity discharge device, classified in class 445, subclass 46.
2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case as opposed to the operating steps being applied to a microcavity device, the steps can be applied to a plasma display device or a field emission display device.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
